

Side Entry Support Strap Installation Instructions

Use the enclosed Side Entry Support Strap to keep your PetStep® Folding Pet Ramp secure and stable when used for side door entry

1 Place your PetStep ramp in position through the side door of your vehicle, resting on the car seat.

2 Insert the silver ramp hook into the slot at the unsupported top corner of the PetStep ramp. (The other corner rests on the car seat.)

3 Rotate the hook into the position as shown to secure it into the ramp.

4 Place the large black hook at the other end of the strap over the car door window frame.

5 Lift the tab on the adjustment buckle to change the length of the strap if needed to make it taut. Relock the tab to secure the strap.

6 The Side Entry Support Strap will now be secured in place and supporting the corner of the ramp, preventing it from tipping.
