

Adding weight to Folding Ramp Installation Instructions

Use In deeper pools, the PetStep Pool Ramp may be slightly buoyant, but not to worry, we have a simple solution!

To counteract this buoyancy, we recommend two things. First, you can attach the PetStep Locking Brace Kit to lock in the ramp so that it doesn't bend at the hinge. Second, you can easily attach weights to the locking brace kit with zip ties. We recommend using vinyl or neoprene-covered hand weights since most households usually own a pair. The weights can vary from 5-10 lbs.

INSTRUCTIONS:

- Loop an 8" or longer zip tie through each of the two empty middle holes on the locking braces.
- Turn the PetStep ramp over to expose the underside. Position the locking brace over the screw inserts on either side of the center hinge.
- Fasten the locking braces to the ramp using the included fiddle screws.
- Position the weight over the installed locking brace. Use the zip ties to secure the weights to each locking brace.
