

Puppy Treads Application Instructions

STEP ONE: Clean the surface with a mild cleanser. Make sure to sweep away your pup's hair!

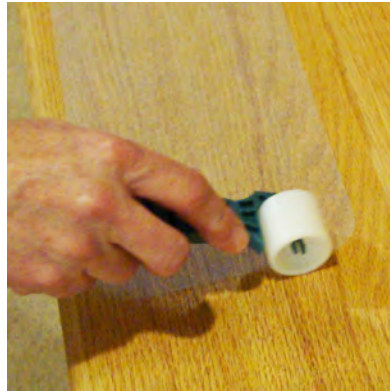

STEP TWO: If needed, the Puppy Treads can be cut to size with a pair of scissors.

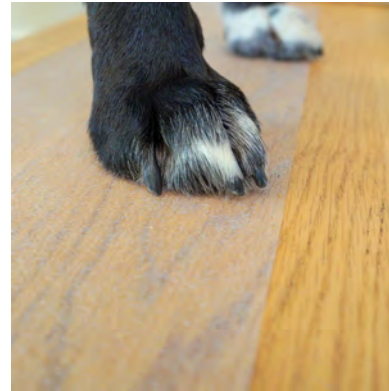

STEP THREE: Once the surface is fully dry, peel off the release paper from the Puppy Tread.

STEP FOUR: Press the adhesive side of the Puppy Tread onto the surface.

STEP FIVE: Use your hands or a rubber hand roller to roll out any air bubbles that might have been trapped when placing your Puppy Treads.

STEP SIX: Installation is finished. Now your pup's paws won't slip and slide around!

Note: Do not apply Puppy Treads when the surface temperature is below 50°. Colder temperatures can interfere with the efficacy of the adhesive.

The slippery stairs were a bit "ruff" on my paws, but then my human applied Puppy Treads so I can walk with comfort and confidence!
