

## PetStep Zinc Anodes Kit Installation Instructions

**When attached to the PetStep pool legs, the zinc anodes reduce the white oxidation buildup that can occur when the aluminum legs are exposed to chlorine.**

### PACKAGE CONTENTS:

- 2 two-inch zinc anodes
- 2 #8 x  $\frac{3}{4}$ " drill and tap screws

### INSTRUCTIONS:

Position one (1) zinc anode on the surface of each of the pool legs. You can place it anywhere on the legs, but we recommend placing it as indicated in the drawing below because it is easiest to access. You can do this before or after attaching the pool legs to the ramp.

Align the self-tapping screws through the pre-drilled holes on each of the anodes. Use a power drill with a Philips head bit to drill the screw into the pool leg and secure the anode.

Once secured, your pool legs are ready to go in the water!
